

# PRESS RELEASE

Consortium organization of KNOW4FARM project is set to launch a series of **Interactive Webinars** aimed at boosting the digital literacy and precision agricultural skills of VET trainers and educators. Scheduled from August to September 2024, these sessions are designed to integrate cutting-edge precision agriculture technologies into farming practices, promoting sustainability and efficiency.

## Goals of the sessions

- Enhancing the understanding of precision agriculture among VET trainers.
- Promoting the adoption of digital tools in agriculture.
- Supporting EU policies on sustainable agricultural development.

## Topics to be discussed during the event

1. Digital Approaches in Precision Agriculture
2. Precision Farming Techniques
3. PA Technology Distribution in Europe
4. Effective Crop Management with PA
5. PA Practices in Livestock
6. EU Initiatives in Agriculture and Digitalization

## Profile of Participants

- 45 VET trainers and educators (15 from each partner country)
- Agricultural staff and local municipality counselors

## Expected Outcomes

- Improved digital literacy and precision agricultural skills among VET trainers.
- Enhanced collaboration and networking between participants.
- Increased adoption of sustainable farming practices across Europe.
